

## OU Campus Updates

---

### Most Recent Version: 10.10.1

OU Campus version 10.10 was released on December 18, 2018. It contains the new feature, [Components](#).

Components are an easy way to enter content into complex design elements. Each component consists of a form for your content editors to fill out, and source code that takes those answers and applies styling and formatting. Like snippets, components become part of the source code of a page, but like assets, when the original component is updated, all components placed on pages are affected, too.

Once the version is released and stable, self-hosted customers will be notified to schedule their version upgrade.

You can view the release notes either in the help menu of OU Campus, or [via the OCN](#).

### Components FAQ

**Q:** Where can I put components?

**A:** Inside editable regions on pages.

**Q:** How do I add a component to a page?

**A:** Click the "Insert Component" button ( ) in the JustEdit toolbar. Fill out the component fields and click **Insert**.

**Q:** I don't see components in my toolbar.

**A:** Components are not available if you're using the Classic WYSIWYG editor. Also, has a custom toolbar been assigned to you or the page you're working on? Components is off by default on all custom toolbars. Administrators can edit toolbars from **Setup > Toolbars**.

**Q:** Who can make and use components?

**A:** Any user with editing permissions can add components to pages. Only level 10 users can create, edit, and launch components, from **Content > Components**.

**Q:** Can I put an asset in a component?

**A:** An asset picker can be included in the component form. However, you cannot put an asset in a component's source code. Only web content, source code, and plain text assets can be inserted.

**Q:** Can I put a snippet in a component?

**A:** No.

**Q:** I don't have any components in my account.

**A:** Components are customizable content like snippets and assets that you must create before you can use. If you're interested in professional development to make components, contact your account director.

**Q:** I put a component on a page and the page broke.

**A:** Because components are inserted into the source code of the page, they must be valid XML to work correctly.

**Q:** I'm a self-hosted customer, when do I get components?

**A:** OU Campus releases are generally available for self-hosted customers about one to two weeks after the SaaS release date. Your institution will be contacted by email to schedule a version upgrade.

**Update 1/4/18:** A version of OU Campus with components is projected to be available to self-hosted customers in late January/early February.

**Update 1/24/18:** Version 10.10.1 is now available for self-hosted customers. Reach out to our helpdesk to schedule an upgrade.

If you experience unexpected results when first using OU Campus after a release, please clear your browser's cache and relaunch the browser.

## Previously Released

OU Campus version 10.9 came out on August 9th, 2018. It contained the ability to make [accessibility check exceptions](#).
