

Creating a New Page

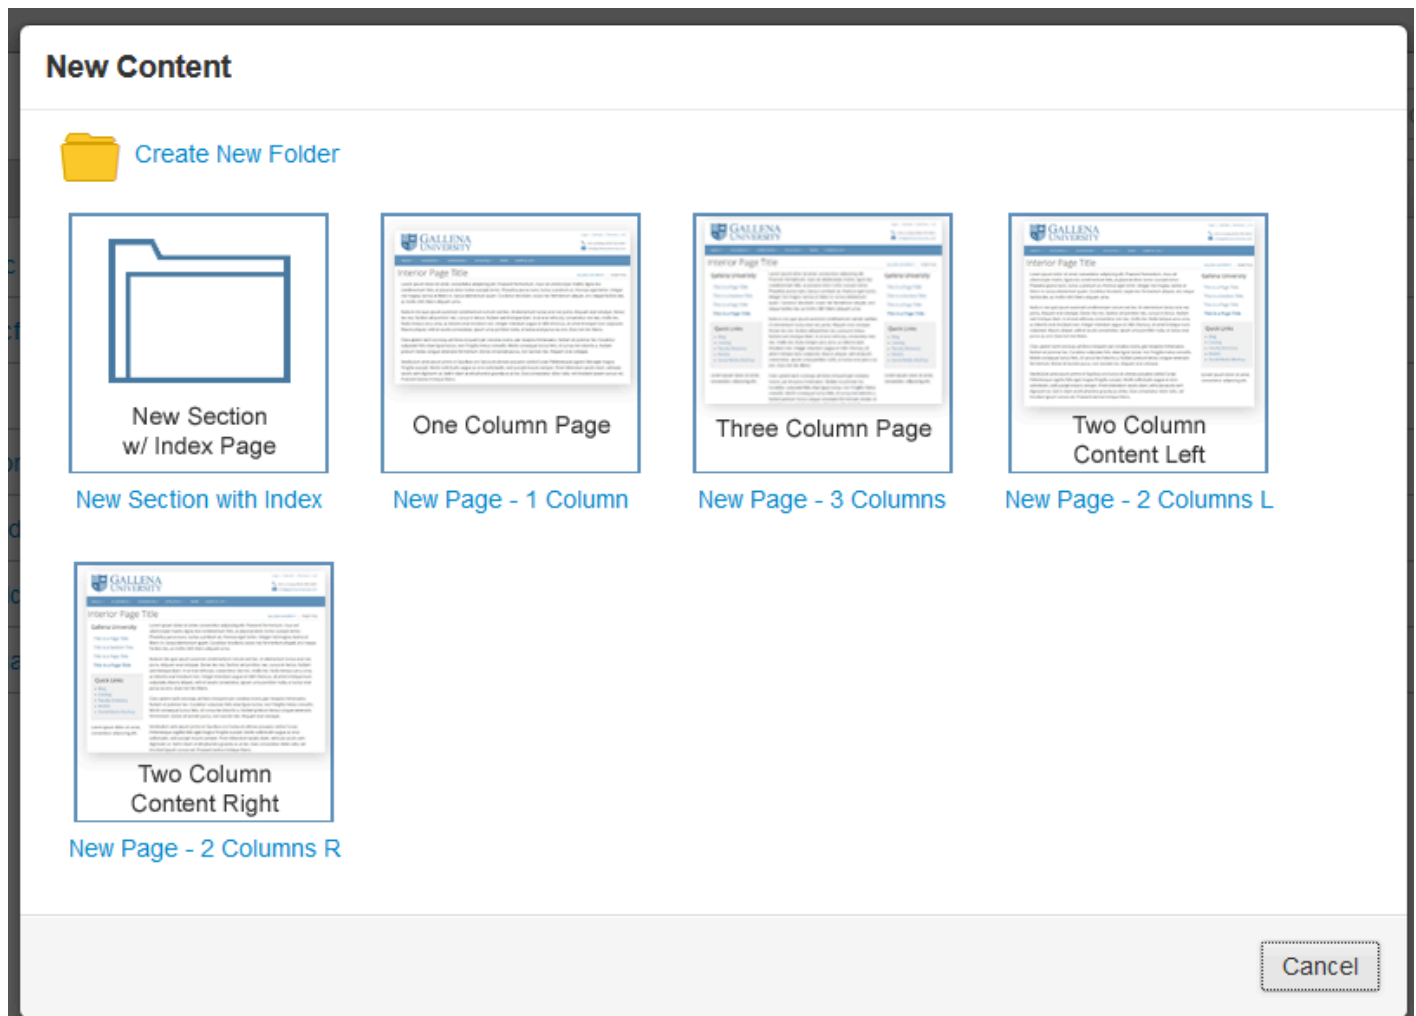

Overview

A new page can be created from existing templates within the OU Campus system by accessing the Pages list view. The Pages list view can be accessed by selecting **Content > Pages** from the global navigation bar. Not all users have the authority to create new pages, and users with authority to create new pages may have restricted access to the type of template that may be used. Users have access to the following screens during the new page creation process:

- **New Content Modal (or drop-down menu):** Allows users to choose from the available templates to create a new piece of content.
- **New Page Modal:** This modal appears after a template has been selected and contains the fields necessary for page creation (including filename, basic metadata, page parameters, and custom template options).

New Page Creation Options

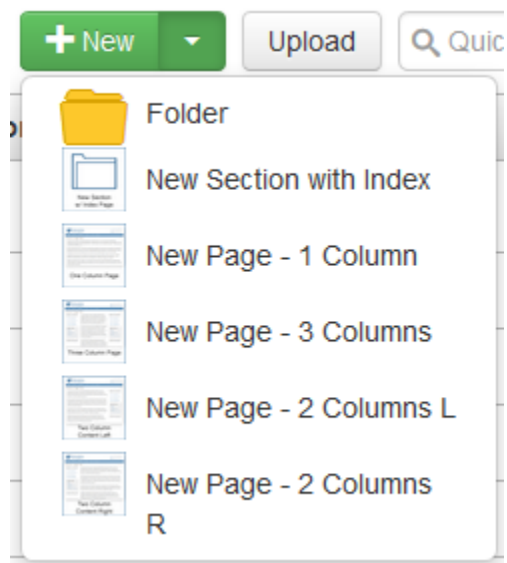

A new page can be created from the Pages list view by clicking the **New** button. The **New Content** modal will appear.

The templates available vary depending on access settings. Users can click one of the template icons to open the New Page modal for a new page using the selected template. The New Content modal includes:

- **Template Icon:** Provides users a thumbnail icon, usually depicting the functionality of the template associated with the image.
- **Template Name:** Provides the name of the template (or the template's file name) as it appears in the OU Campus system.

Users can additionally click the drop-down indicator on the **New** button to display the available templates.

New Page Modal

After users select the template to use for the new page creation process, the **New Page** modal displays. This is also referred to as the **New Page Wizard**. The options available on this modal are directly dependent upon the options defined in the template design files and the XSL. Users fill out all necessary parameters in this modal to create a basic page, usually without adding content at this stage. Page content is added later by the user with the WYSIWYG Editor.

New Page

General Page Setup

Page Title

Enter the page title. This will also be displayed by search engines as well as the web browser window.

Description

Enter a short description of the page, to be displayed by search engines.

File Configuration

Filename

Enter a filename using only lowercase letters, underscores, or dashes

Add Navigation Item

Specify if this page should be added to the current directory's navigation automatically.

Page Options

Overwrite Existing

If selected, this file will overwrite any existing file of the same name in the same location.

Creating a New Page

To create a new page in OU Campus:

1. Navigate to the Pages list view by selecting **Content > Pages** from the global navigation bar.
2. Click the **New** button, or use the drop-down menu.
3. Select the type of page to be created.
4. Fill out the **New Page** information in the displayed modal.
5. When the information is completed, click **Create**.
